초록(abstract)은 학위논문 전체의 개요(overview) 또는 요약(summary)에 해당하는 내용으로 구성되며, 논문의 주요 내용(main story)과 몇 가지 세부 사항을 포함한다. 논문 전체를 읽는 독자나 그렇지 않은 독자에게 모두 명확하여야 한다.

초록에 기술되어야 하는 주요 내용은 1) 문제의 정의(problem definition), 2) 문제의 답을 도출하기 위하여 사용한 방법 또는 도구, 3) 연구를 통하여 얻은 결과 및 결론, 4) 가능하다면 연구결과에 대한 의미, 파급효과 등에 대한 토의(discussion)를 포함한다.

초록은 일반적으로 하나의 문단(paragraph)으로 작성하며, 한 문단에서 내용이 흐르게 연속성을 유지하고, 흐름을 위한 신호(signal) 단어를 사용한다. (예, We found that..., We concluded that..., We suggest that...)

I. Introduction

1.1 Contents of the Introduction

The introduction consists of the research background and necessity, previous studies or theoretical background, and the objectives and contents of the study.

1.1.1 Function and Structure of the Introduction

The introduction of a thesis generally has the following functions:

- (1) To attract the reader's interest (direct, specific, concise, and clear)
- (2) To provide sufficient information for readers to understand the thesis
- (3) The most important sentence is the research question

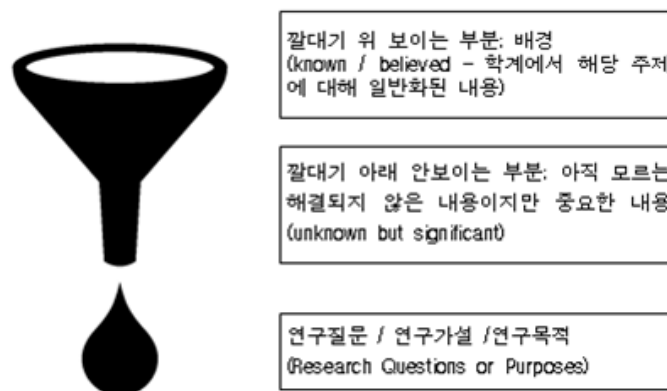

Figure 1-1 Shape of Introduction

1.1.2 Tense in the Introduction

The tense used in the introduction generally follows these rules:

- (1) Background or general knowledge should be written in the present tense
- (2) Previous studies published by other researchers should be written in the past tense
- (3) Statements indicating the research purpose or research questions are generally written in the past tense

(The purpose of this study was to investigate ...)

1.2 Thesis Formatting Style

1.2.1 Heading System

Chapter numbers are written using uppercase Roman numerals. Chapter titles should use a serif font (e.g., Times New Roman) in 16pt bold and be center aligned. Subheadings should be numbered as 1.1, 1.1.1, and so on, without a period after the final number. Subheadings should use a serif font in 14pt bold and be aligned to the left.

A spacing of 10pt should be inserted below each heading line. Additional paragraph spacing can be adjusted using the paragraph settings function of the word processor.

If a heading appears at the last line of a page, extra blank space should be inserted so that the heading moves to the first line of the next page.

1.2.2 Main Text

The previous guideline specified the main text format as Times New Roman 12pt with fixed character spacing. However, for better readability, it is recommended to use 100% character width and 0% character spacing.

In addition, the line spacing is increased from 160% to 200%, and paragraph inden-

tation is set to 10pt using the paragraph indentation function. Using manual spaces at the beginning of a paragraph is discouraged.

1.2.3 Figures and Tables

Figures and tables should be center aligned. Figure captions should be placed below the figure and centered, while table captions should be placed above the table and aligned appropriately. Captions should use a sans-serif font in 11pt bold.

Figure and table numbers should follow the “chapter number–serial number” format, such as Figure 2-1 and Table 2-1, without a period after the number. One blank space should be inserted between the number and the title.

Figures and tables should preferably be placed at the top or bottom of a page.

Paragraphs containing figures or tables should not be indented. Captions and contents of figures and tables are recommended to be written in English.

Figure 1-2 Title of the Figure

Table 1-1 Title of the Table

		Diameter (mm)	Sectional Area (mm²)	Effective Stress (MPa)
Rebar	Vertical (#14)	43.0	1452	—
	Hoop (#18)	57.3	2579	—
Tendon	Vertical	86.5	5877	855.8
	Hoop	86.5	5877	855.8

1.2.4 Equations

Equations should be center aligned, and equation numbers should be placed on the right-hand side. Equation numbers should follow the “chapter number.serial number” format and be enclosed in parentheses.

$$\omega_1 = 2 \frac{G_F}{f_{ctm}} - 0.15\omega_c \quad (1.1)$$

A blank line may be inserted above and below equations. However, if multiple equations appear consecutively, no blank line should be inserted between them.

1.2.5 Citation Style in the Main Text

1. Parenthetical citations provide brief information about referenced works within parentheses when citing another author’s work in the text.
2. Citations should include the author name and publication year within parentheses.

Page numbers may also be included if necessary. If the citation appears at the end of a sentence, the period should be placed outside the parentheses. For Korean au-

thors, both family and given names are written, whereas for foreign authors only the family name is used.

Examples)

- a. For a single author:

...(Hong, 2021, pp. 135–146).

Hong(2019) stated that ...

Adams(2018, pp. 135–140) reported that ...

- b. For two authors:

Hong and Lee(2018, p. 35) argued that ...

Adams and Robert(2019) suggested that ...

- c. For three or more authors:

Hong et al.(2018, pp. 25–28) demonstrated that ...

Adams et al.(2020, pp. 25–28) reported that ...

3. Multiple references should be separated using semicolons.

Example)

...(Hong, 2017; Lee and Lim, 2018; Adams et al., 2020).

II. Main Body

The main body generally consists of one to three chapters and describes the research contents, research methods, and research results. It should logically and clearly explain the process of answering the problem (research question) defined in the introduction.

2.1 Research Methods

Function of the Research Methods

- To inform readers in detail about what the researcher conducted in order to answer the research questions described in the introduction

Contents of the Research Methods

1. Materials (research subjects)
2. Methods: detailed description of the methods used in the study, such as analytic, experimental, numerical, and statistical methods

Verb Tense in the Research Methods

1. Past tense should be used when describing performed methods (···was measured using the OO method)
2. Present tense should be used when describing data (···is summarized as the mean and standard deviation)

2.2 Research Results

Function of the Research Results

1. To describe in detail the results obtained through the methods presented in the research methods section

2. To support the research results with evidence such as data, tables, or figures

Contents Included in the Research Results

1. Only results relevant to the research questions raised in the introduction should be presented (data only without interpretation – interpretation should be included in Chapter IV. Discussion)
2. All results should be included regardless of whether they support the research hypothesis

Verb Tense in the Research Results

- Results should generally be reported in the past tense

III. Method

The conclusion generally consists of a single chapter and includes discussions of the research results, conclusions, and suggestions for future work.

3.1 Discussion

Function of the Discussion

1. To provide answers to the research questions presented in the introduction
2. To explain the results supporting the answers to the research questions and describe how these answers fit within the current body of knowledge

Contents Included in the Discussion

1. Answers to the research questions raised in the introduction (the first sentence of the discussion should restate the research question introduced earlier and immediately provide the answer)
2. The discussion should include support, explanation, and defense of the answers; explanations for results that do not support the answers; the novelty of the study; differences from previous studies; explanations of unexpected results; limitations of the research methods or study design; validity of the research assumptions; and implications regarding the importance and significance of the study

Verb Tense in the Discussion

1. Verb tense should be selected according to whether the sentence describes the answer to the research question or the research results
2. Present tense should be used when discussing answers to the research questions

3. Past tense should be used when describing research results

IV. Results

4.1 Results of Prestressing Load Application

Function of the research results:

- To describe in detail the results obtained through the methods presented in the research methods section
- To support the research results by presenting evidence (data) directly through tables or figures

Contents included in the research results:

- Only results relevant to the research questions raised in the introduction should be presented (only data should be presented without interpretation — interpretation should be included in the conclusion)
- All results should be included regardless of whether they support the research hypothesis

Verb tense in the research results: results should generally be reported in the past tense.

V. Conclusion

The conclusion generally consists of a single chapter and includes discussions of the research results, conclusions, and suggestions for future work.

5.1 Discussion

Function of the discussion:

- To provide answers to the research questions presented in the introduction
- To explain the results supporting the answers to the research questions and describe how these answers appropriately fit within the current body of knowledge

Studies on the impact and structural behavior of nuclear containment structures have been conducted using various methodologies. Jung analyzed the nonlinear dynamic behavior of CANDU-type nuclear containment structures subjected to aircraft impact loads 정철현 (2002), while Choi performed a local impact analysis of prestressed nuclear containment walls considering the effect of prestressing 최선희 (2014). In addition, Kyratsis investigated children's interactions and the co-construction of peer culture Kyratsis (2004). In the field of anxiety and depression treatment, Wells proposed a metacognitive therapy approach Wells (2009a,b, 2010). Milnes analyzed the possibility of reducing adolescent depression using generative instruction methods Milnes (1998). Furthermore, explanations regarding website citation methods can be found in Caulfield's APA style guide Caulfield (2020).

Advisor : Professor ○ ○ ○

In this study, [write your abstract here]. The abstract should be written as one paragraph within 2 pages.

Abstract content should include: (1) the research question(s); (2) what was done to answer the research questions (methods); (3) the main results obtained; and (4) if possible, the background and significance of the main results.

Write the abstract as one paragraph, maintaining continuity so the content flows, and using signal words: We found that ..., We conclude that ..., We suggest that ...

Keywords: keyword1, keyword2, keyword3, keyword4, keyword5

Acknowledgements

Write your acknowledgements here.

I would like to express my sincere gratitude to my advisor, Professor ○ ○ ○, for his/her invaluable guidance and support throughout the completion of this thesis.
